

# Senior Full Stack Software Engineer

RateSetter – a global FinTech leader – redefining savings and loans for all Australians

We are RateSetter, one of the world's largest peer-to-peer lenders and an award-winning Fintech pioneer. Our innovative online platform connects lenders who want a better return on their money with creditworthy individuals and businesses who want a simple, competitive loan.

We launched in Australia in 2014 and are the only peer-to-peer lender to truly democratise finance by accepting investment from all Australians. We've matched thousands of lenders and borrowers for over \$250m of loans, but we're just getting started: we believe the financial system has become bloated and inefficient, and we leverage technology and data to give value - and power - back to the consumer. We offer the most awarded, and highly rated, personal loan in Australia.

As a Senior Software Engineer, you will work in a fast-paced team across multiple products, both internal and external facing. As a senior team member, you will contribute to software design / architecture and help steer technology adoption. Your daily work will involve anything from developing customer journeys using the latest front-end frameworks to modelling our business using Domain Driven Design and Event Sourcing.

## Key responsibilities of the role include:

- Elicitation / validation of requirements, collaborating on agile work breakdown / planning
- End to end delivery of user stories including testing / product support
- Design across existing and new products including API, domain and database design
- Automated testing including unit, acceptance, integration and UI
- Contribution to development practices, framework choices, and recruitment

## To be successful in this role you will have:

- 3+ years working in software development roles
- 1+ years in .Net
- Strong software fundamentals (performance, patterns, structure)
- Architectural knowledge including concerns related to micro services
- A continuous process of self-learning
- A test-driven approach

## You can expect from us:

- A competitive remuneration package
- A platform to perform, with excellent opportunities for professional development as we grow
- The chance to work with a collegial, fast growing team of talented, highly motivated professionals
- An open culture where we share our results and your input is valued
- An environment in which you're encouraged to utilise all your talents, not just the ones written in your job description (we welcome all of you at work - we don't want you to leave your personality at home!)

## RateSetter currently uses the following technologies / languages:

- .Net / .Net core, NodeJs, Powershell, Angular, REACT
- Microservices architecture, event sourcing, DDD, BDD
- TeamCity, Octopus Deploy, BuildMaster
- AWS – Cloudformation, EC2, Lambda, Router53, VPC, ASG, CodeDeploy
- Windows Server, Ubuntu, SqlServer, Redis, AWS DynamoDb

Our office is based on Martin Place in the Sydney CBD.
